

# 10-Day Roadmap to Become a Junior Developer

## Lock your room for 10 days. Come out as a Junior Developer.

Lock your room for 10 days. Come out as a Junior Developer.

Are you confused where to start? No more excuses. This is for you the one who truly wants to build a new life through development.

This plan is intense, focused, and absolutely beginner-friendly. If you follow this for 10 days without giving up, you'll become a confident Junior Developer.

Let this roadmap be your light.

## Your 10-Day Battle Plan

**Day 1 - HTML Foundation:** Learn structure, tags (<div>, <h1>-<h6>, <img>, <a>, <ul>, <form>), nesting, links, and semantic HTML.

Project: Create your personal introduction page.

**Day 2 - CSS Styling:** Learn colors, fonts, margins, paddings, borders, backgrounds, positioning, units (px, %, rem).

Project: Style your intro page with a beautiful design.

**Day 3 - Flexbox & Grid:** Master layout systems. Flexbox (row, column, center, gap) and Grid (columns, areas).

Project: Create a pricing card layout using Flexbox.

**Day 4 - Mini Layout Projects:** Build landing pages, headers, footers, and sections combining HTML + CSS.

Project: Clone a basic Netflix or YouTube UI.

**Day 5 - Bootstrap:** Use Bootstrap 5 to build responsive UIs faster (containers, cards, navbar, grid system).

Project: Portfolio homepage using Bootstrap.

**Day 6 - JavaScript Basics:** Variables, datatypes, functions, conditionals, loops. Use console & alert.

Project: Number guessing game.

# 10-Day Roadmap to Become a Junior Developer

**\*\*Day 7 - DOM & Events:\*\*** Select elements, add event listeners, manipulate content.

Project: Build a dynamic todo app.

**\*\*Day 8 - JS Projects:\*\*** Build real apps using JS logic.

Project 1: Calculator | Project 2: Weather App using API

**\*\*Day 9 - LocalStorage + Forms:\*\*** Save data locally, interact with forms, validate inputs.

Project: Feedback form that stores data.

**\*\*Day 10 - Final Portfolio + GitHub:\*\*** Combine all you learned into a clean portfolio site. Host on GitHub Pages.

Bonus: Choose 3 projects from this repo and add:

## Final Words from ImmuCoder

You dont need to be perfect. You just need to start.

This journey wont be easy, but it will be worth it. Your future self will thank you for the discipline you showed today.

Practice. Build. Repeat.

And when you finish this roadmap go explore these 100 real-world projects:
